# Navin Avadhani

+91 99160 73308 knavinavadhani@gmail.com

I am an IT professional, with over 10 years of experience, who has recently transitioned to a full-stack software engineer. Specializing in crafting immersive web experiences, I am dedicated to delivering reliable and innovative applications.

## **Technologies and Languages**

Languages: JavaScript, TypeScript, Python, HTML5, CSS3, SQL

• Technologies: React, Next.js, Express.js, Node.js, Bun.js, Hono, tRPC, PostgreSQL, MySQL, MongoDB

• Other: Git, Docker, Redis, Kafka, Framer Motion, Vercel, AWS, Cloudflare

## **Education**

MBA Global, Swiss Business School, United Arab Emirates
 B.E. Information Science & Engineering, Visvesvaraya Technological University, India
 2015 - 2016
 2008 - 2012

## **Projects**

- Plysera A project management app that helps teams collaborate and manage tasks efficiently. It uses a Next.js frontend and an Express.js backend with tRPC for secure, reliable communication between the two. To keep the app fast and responsive, I added WebSockets for real-time updates, letting users see changes instantly. I also used Redis for caching and pub/sub to speed up load times and reduce database strain. For handling large task volumes, I implemented Kafka brokers for queueing and batch processing, making the app scalable and dependable. Plus, Plysera includes a real-time chat and comments system to improve team coordination and communication on projects. Plysera is in active development and will be deployed shortly.
- FSplit Developed using Next.js and TypeScript, FSplit is an intuitive expense management application designed
  for efficient expense tracking and division among user-defined groups. It includes a secure friends system where
  only existing members can add new friends to groups, ensuring controlled access. FSplit utilizes a specialized
  algorithm to simplify group debts, enhancing accuracy in expense management. With a responsive design and
  Progressive Web App (PWA) capabilities, FSplit delivers a seamless user experience across devices, prioritizing
  functionality and usability. Live Link | GitHub
- MintSaga A Next.js-based block chain app for storing historical images as NFTs. A 100,000 INR bounty winner
  at the Abstraction Hackathon, it features OAuth-based wallet linking, supports multiple wallets per account, and
  allows public visibility toggling, favorites, and community comments. Includes dark mode, theme switching, and
  PWA capabilities. <u>Live Link | GitHub</u>
- **Ticket It** A Next.js-based helpdesk ticketing system with dynamic layouts for different user roles, various ticket assignment methods, and comprehensive ticket logs. It ensures secure ticket interactions with robust server and client-side security. Live Link | GitHub
- Hot Tiffin A restaurant point-of-sale system using Next.js and TypeScript. Staff can manage orders, personalize
  profiles, and customize menu items. Features include order history access and category management. <u>Live Link | GitHub</u>
- **Fondingo** A personal blog website using Next.js and TypeScript. It features an admin panel for adding and editing articles. The app is PWA-enabled, allowing users to access it like a mobile app. <u>GitHub</u>

## **Training Projects**

- **EZFlow** A Trello clone developed as a training project using Next.js and TypeScript. It integrates Supabase PostgreSQL with Prisma ORM for database management. Live Link | GitHub
- Quickscribe A Notion-like app created as a training project using Next.js and TypeScript. It uses Convex realtime database for seamless updates. <u>Live Link</u> | <u>GitHub</u>
- Vacation Haven An Airbnb-inspired clone made as a training project with Next.js and TypeScript, utilizing MongoDB with Prisma for database functionality. <u>Live Link</u> | <u>GitHub</u>
- Academix A learning management system with distinct student and teacher modes, developed as part of a training curriculum. It includes an admin panel for adding courses, Stripe payments for course purchases, and secure access to purchased content. GitHub
- Discord clone A real-time chat app developed as a training project using Next.js and TypeScript. It features
  web sockets for real-time communication and PostgreSQL with Prisma ORM for database functionality. <u>GitHub</u>
- **Spotify clone** A music streaming app created within a training curriculum using Next.js and TypeScript. It integrates with a Supabase backend and Stripe for payments. <u>GitHub</u>
- **Bleeper** A Messenger clone chat app developed as a training project using Next.js and TypeScript, featuring web sockets for real-time communication. GitHub
- All Mart An e-commerce app with distinct admin and store sections. The store retrieves product information via API calls defined in the admin panel. Developed with Next.js and TypeScript, it includes Stripe payment capabilities. Admin GitHub | Store GitHub

#### **Achievements**

- Secured a 100,000 INR bounty at the prestigious Abstraction Hackathon for MintSaga, an innovative Next.js-based block chain application.
- Spearheaded the development and implementation of comprehensive IT security policies at Danat Al Emarat
  Hospital, achieving ADHICS compliance a standard comparable to ISO27001. This success led to a seamless
  first-attempt audit.

## **Experience**

### **Full-Stack Web Developer**

#### Self-employed

Nov, 2021 - present

- Focused on growing my skills through self-study and building practical projects.
- Worked with a mix of technologies like JavaScript, TypeScript, React, Next.js, Node.js, Express.js, and databases such as PostgreSQL, MySQL, and MongoDB.
- Created and launched several full-stack applications showcasing my frontend and backend abilities.
- Worked on key projects including FSplit, MintSaga and Plysera, highlighted in the Projects section.
- Worked with new tools like React Server Components, tRPC for type-safe APIs, and Docker for containerized setups.
- Used WebSockets for real-time features, Redis for caching and Kafka for queuing, showing I can handle scalable systems.
- Explored AI agents and model context protocol servers to stay updated with cutting-edge tech.
- Contributed to open-source, learning how community development works.

Abu Dhabi, United Arab Emirates

- Developed the in-house Intranet website from scratch using HTML, CSS, and JavaScript.
- Designed and implemented a user-friendly interface for in-house communication, providing daily updates for staff and organization-wide news.
- Transitioned the Intranet website to the parent organization level, becoming the primary tool for staff announcements.
- Drove the collaborative effort as a key team contributor in establishing the organization's IT infrastructure.
   Contributed significantly to implementing the data center and deploying the current technology stack, playing an essential role in crafting a robust and scalable technological foundation from the ground up.
- Successfully devised and implemented IT security policies, achieving ADHICS compliance (similar to ISO27001), leading to a seamless first-attempt audit success.
- Spearheaded Active Directory administration, designing and implementing group policies, enhancing system efficiency.
- Managed DHCP and DNS, achieving a reduction in troubleshooting time through streamlined scope creation, exclusion management, and reservation practices.
- Directed Zimbra Email Server administration, reducing downtime through proactive monitoring and swift issue resolution.
- Optimized Hyper-V virtualization, reducing server deployment time and enhancing overall system reliability.
- Implemented Symantec Backup Exec, improving data backup efficiency through strategic job creation for system state and snapshot backups.
- Streamlined CIFS file system management on NetApp NAS, enhancing organizational file server operations, managing quotas, Qtrees, and shares.

Systems Engineer Accenture Jun 2012 – Jun 2013

Project: Starwood Hotels and Resorts

Bengaluru, India

- Administered MS Windows Servers, including Active Directory, Multiple Active Directory Forests, and Domains, ensuring seamless user, resource, distribution, and contact management.
- Served as SAP Technical Analyst, demonstrating proficiency in SAP system administration.

#### **Courses and Certifications**

- The Web Developer Bootcamp Udemy | Certificate Link
- React, The Complete Guide Udemy | Certificate Link
- The Complete SQL Bootcamp Udemy | Certificate Link
- Working with TypeScript Udemy | Certificate Link
- JavaScript Algorithms and Data Structures Masterclass Udemy | Certificate Link
- Complete Python Bootcamp Udemy | Certificate Link
- Statistics for Data Science and Business Analysis Udemy | <u>Certificate Link</u>
